MyMavenApp Pipeline:

Step 1: Create a New Pipeline Job

Go to Dashboard → + New Item.
Enter name, select Pipeline, and click OK.

Step 2: Configure Pipeline from SCM

Scroll down and select Pipeline script from SCM.
SCM: Git Enter repository URL and select GitHub credentials.
Click Apply and Save.

Step 3: Create Jenkinsfile

Create a Jenkinsfile in your MyMavenApp project and add the pipeline script.

Enter following code into jenkins file

```
pipeline {
    agent any  // Use any available agent

    tools {
        maven 'Maven'  // Ensure this matches the name configured in Jenkins
    }
    stages {
        stage('Checkout') {
            steps {
                git branch: 'master', url:
'https://github.com/Brijesh-ue/Mymavenapp.git'
            }
        }
```

```
        stage('Build') {
            steps {
                sh 'mvn clean package'  // Run Maven build
            }
        }

        stage('Test') {
            steps {
                sh 'mvn test'  // Run unit tests
            }
        }

        stage('Run Application') {
            steps {
                // Start the JAR application
                sh 'java -jar target/MyMavenApp-1.0-SNAPSHOT.jar'
            }
        }

    }

    post {
        success {
            echo 'Build and deployment successful!'
        }
        failure {
            echo 'Build failed!'
        }
    }
}
```

Step 4: Update pom.xml

Change source and target versions from 1.7 to 1.8.
Commit changes and push to your github repository.

Step 5: Build the Pipeline
Go to Jenkins and click Build Now.
Monitor Build Stages Use Stage View and Full Stage View to monitor execution.
